

Question 4

(25 marks)

The circles c_1 and c_2 touch externally as shown.

$$\sqrt{1^2 + 1^2 + 7} = \sqrt{9} = 3$$

- (a) Complete the following table:

Circle	Centre	Radius	Equation
c_1	$(-3, -2)$	2	$(x+3)^2 + (y+2)^2 = 4$
c_2	$(1, 1)$	3	$x^2 + y^2 - 2x - 2y - 7 = 0$

- (b) (i) Find the co-ordinates of the point of contact of c_1 and c_2 .

Divide $(1, 1)$ and $(-3, -2)$ in ratio $3:2$

$$\therefore \left(\frac{1(2) + (-3)(3)}{3+2}, \frac{1(2) + (-2)(3)}{3+2} \right)$$

$$= \boxed{\left(-\frac{7}{5}, -\frac{4}{5} \right)}$$

**SEC Set E
2013 P2**

- (ii) Hence, or otherwise, find the equation of the tangent, t , common to c_1 and c_2 .

$$\text{Slope } IL = \frac{1+2}{1+3} = \frac{3}{4}$$

$$\therefore \text{Slope } t = -\frac{4}{3}$$

$$\therefore \text{Egn: } y + \frac{4}{5} = -\frac{4}{3}(x + \frac{7}{5})$$

$$\therefore 15y + 12 = -20x - 28$$

$$\therefore 20x + 15y + 40 = 0$$

$$\therefore \boxed{4x + 3y + 8 = 0}$$
