

2014

(b) (a).

$$\text{mass} = 20 \text{ kg}$$

$$h = 2 \text{ m.}$$

$$F_{up} = 400d \text{ N.}$$

(i) when block at EP; $F_{up} = F_{down}$.

$$400d = 20g$$

$$d = \frac{20g}{400} = \boxed{0.49 \text{ m}}$$

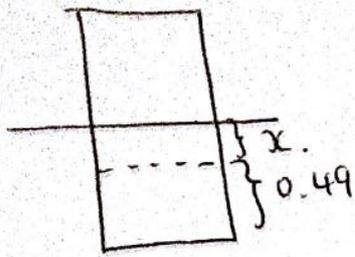

$$(ii). \underline{\underline{T = \frac{2\pi}{\omega}}}$$

@ $x = 0.3$, $a = \underline{\underline{\text{max}}}$ because 0.3 is the amplitude.

$$a = -\omega^2 x.$$

$$\textcircled{a_{\text{max}}} = \omega^2 A.$$

↑ we don't have this,
so we're gonna have to
find ω a different
way!

$$F = F_{\text{down}} - F_{\text{up}}$$

$$F = mg - 400(0.49 + x)$$

$$F = 196 - 196 - 400x$$

$$F = -400x$$

$$ma = -400x$$

$$a = \frac{-400}{m} x = \frac{-400}{20} x$$

$$a = -20x$$

$$\therefore \omega^2 = 20$$

$$\underline{\underline{\omega = \sqrt{20}}}$$

$$\therefore T = \frac{2\pi}{\sqrt{20}} = \frac{2\pi}{2\sqrt{5}} = \boxed{\frac{\pi}{\sqrt{5}}} \text{ s}$$
